University- Adamas University

Author- Chandrima Basu

Designation-Masters in Public Administration and governance

Abstract:

Artificial intelligence rigour is whole-heartedly then only be accepted when it's frameworks are made globally taken forward. The coming generations need ready made fauaults of Artificial intelligence. So the preparation for it needs a number of assessments that must be done based on its parameters and world based values.

Keywords:

Assessment, parameters, values, acceptance, preparation

The artificial intelligence based on human made algorithms which are here to make the solutions out of problems, where the human problems can be seen in the air, but the fastest making it out as a solution is a time bound work which has been made quicker by the artificial intelligence., the making of industry based framework where industry 4.0 and industry 5.0 has been aligned with the present day algorithms in order to stay interrelated with the virtual world. Robotics is basically made out of such algorithms given with a human like domain where such algorithms are made fit as per the human respond stimuli/stimulus , gets circulated in the full body communication networks and the robotics communication networks and the robotics mechanism working criteria gets discussed in the similar way. The binary language is 0 and 1 where this works as a mathematical calculation to it. The interaction in education is basically making the calculations faster but discussing in positive or negative ways both will take us to the protocol not having this three(Artificial intelligence, robotics, and human computer interaction) in question as because till date we haven't made this three sovereign to our needs and the day it will be made the whole nation would be free from the conception that this can harm the privacy, health and also human intellect. Therefore making this a vision could help us get to our dreams come true. The visionary ideologies will only help us to redeem such a scenario to a better day outcome and manifest it in the whole world so, that the sustainability can help us grow in the sphere where we are storing our ideas.
